Lateral Thinking Puzzlers

Synopsis

Logic is not enough! To unravel a lateral puzzle, you have to train your brain to think differently. Ranging from (relatively) easy to fiendishly hard, these classic conundrumsâalmost 100 of themârequire mental agility. Can you figure out these problems from only the vaguest details and yes-or-no questions? Itâs challenging, imaginative fun. Â This revised edition features entirely new illustrations!

Paul Sloane studied engineering at Cambridge University and works in software marketing. His passion for lateral puzzles started when he met a dwarf standing on a block of ice in an elevator. Lateral Thinking Puzzlers, originally published by Sterling in 1991, was his first book and has gone on to become a bestseller. He has many other collections, including several with Des MacHale.

Paul Sloane's collection of lateral thinking puzzles presented here are thoroughly enjoyable and quite a challenge. However, as a longtime fan of such puzzles, more often than not I knew a solution due to prior knowledge and NOT due to personal ability. So, this would probably be the ideal book for someone who hasn't read many lateral thinking puzzles. I did like that the puzzles were divided into sections based on difficulty. That was helpful.

I use a puzzle each Friday with my 8th grade students. I read the puzzle and they can only ask YES or NO questions. It's great to see their creativity, and the competition to solve the puzzle first is

intense. They look forward to it every Friday! I highly recommend this book!!

my daughter is into lateral thinking books (12) and she really enjoyed this one b/c it didn't have totally ridiculous situations and puzzles.

lots of fun

thanks!

My students are really enjoying these puzzles. They can hardly wait each day for us to do one in class. I highly recommend this book.

My 13 years old loves these puzzles! He likes to see if we can figure them out also!

Great book format- I like the separate sections for clues and answers!! I would recommend this book to anyone who likes these kinds of puzzles!
