Forest Ecology

Synopsis

This revised and reorganized text is designed for a standard forest ecology course for undergraduates in forestry, natural resources, environmental science, environmental ecology, and field ecology programs. Provides an eminently current perspective on the material by emphasizing forest ecosystems using a landscape-ecosystem or geo-ecosystem approach. Written by both field teachers and researchers of forest ecology and practitioners of forest ecology in both public and private arenas. Treats traditional plant ecology topics of community, succession, biota from a landscape ecosystem perspective, also emphasizes earth science.

Book Information

Paperback: 774 pages

Publisher: Wiley; 4th edition (February 24, 1998)

Customer Reviews

This particular reference book does a very good job explaining the fine details involved with forest ecology. I recommend anyone going into the environmental science field look in to buying this.

If you don't know your phenotype from your genotype, have no fear - this text begins with the basics before taking you through beginning and intermediate topics. I found the text engaging and not too dry (for a technical book - if you were looking for strictly entertaining, you probably wouldn't be here, right?).

I was required to purchase this text for a class. I am highly unimpressed and have suggested the teacher look for new material in coming semesters. Good luck if you have to read this.

Good for my work.

I had to buy this for required reading, don't really remember much of it but I know that it was very informational.

Has an extensive bibliography, but bibliographies are useless to me. Needed but lacking is an extensive index. Text is average.

a huge book~~

Was the same condition as brand new, pages were crisp, no writing, no ware, no damage what so ever !
