Shocked: Adventures In Bringing Back The Recently Dead

Synopsis

Not too long ago, there was no coming back from death. But now, with revolutionary medical advances, death has become just another serious complication. As a young medical student, Dr. David Casarett was inspired by the story of a two-year-old girl named Michelle Funk. Michelle fell into a creek and was underwater for over an hour. When she was found she wasn't breathing, and her pupils were fixed and dilated. That drowning should have been fatal. But after three hours of persistent work, a team of doctors and nurses was able to bring her back. It was a miracle. If Michelle could come back after three hours of being dead, what about twelve hours? Or twenty-four? What would it take to revive someone who had been frozen for one thousand years? And what does blurring the line between "life" and "death" mean for society? In *Shocked*, Casarett chronicles his exploration of the cutting edge of resuscitation and reveals just how far science has come. He begins in the eighteenth century, when early attempts at resuscitation involved public displays of barrel rolling, horseback riding (sort of), and blowing smoke up the patient's various orifices. He then takes us inside a sophisticated cryonics facility in the Arizona desert, a darkroom full of hibernating lemurs in North Carolina, and a laboratory that puts mice into a state of suspended animation. The result is a spectacular tour of the bizarre world of doctors, engineers, animal biologists, and cryogenics enthusiasts trying to bring the recently dead back to life. Fascinating, thought-provoking, and (believe it or not) funny, *Shocked* is perfect for those looking for a prequel "and a sequel" to Mary Roach's *Stiff*, or for anyone who likes to ponder the ultimate questions of life and death.

Book Information

Hardcover: 272 pages

Publisher: Current; 1 edition (July 31, 2014)

Language: English

ISBN-10: 1591846714

Customer Reviews

âœA specialist in end-of-life care at the University of Pennsylvania, Dr. Casarett has produced a travelogue about as comprehensive as possible without actually dying... His guide to the process of hauling passengers back up the exit ramp is fascinating.â•â "New York Times" âœ[Casarett] traces the colorful history of efforts to revive the dead with meticulous reporting and humorâ•â "Washington Post" âœAn exciting, firsthand account of scientific research whose implications are relevant to every living person.â•â "THE FUTURIST magazine" âœEntertaining, informative, and at times, electrifying.â•â "Booklist" âœCasarett accessibly reveals the work being done that may enable us to sleep far more, and so travel far furtherâ "in both place and timeâ "than we ever dreamed.â•â "Publishers Weekly" âœWith a keenly-honed sense of true curiosity and a killer wit, the author gamely goes from mortuary to museum and back to look deeply at how âœdeadâ• is maybe not really dead these days. He melds old-school myth with modern technology to see why lives are saved (or not), and his irreverent comments and hilarious observances give the title of his book a wicked double meaningâ | Death is a trip weâ™ll all take, and some of us will be lucky enough to return with minimal souvenirs. If youâ™re ready to laugh in the face of that, then reading âœShockedâ• should be your aim.â•â "Terry Schlichenmeyer, âœThe Bookwormâ• in The Killeen Daily Herald

David Casarett, M.D., is a physician, researcher, and tenured associate professor at the University of Pennsylvania Perelman School of Medicine. His studies have included more than ten thousand patients and have resulted in more than one hundred articles and book chapters, published in leading medical journals such as the Journal of the American Medical Association and The New England Journal of Medicine. His many awards include the prestigious U.S. Presidential Early Career Award for Scientists and Engineers.

I have been interested in resuscitation since reading Kouwenhoven's article in JAMA in 1960, at the time being a sophomore in High School. It was a epiphany for me, as what Kouwenhoven and Jude wrote, revolutionized the understanding of death. What had been the criteria to determine death before 1960 suddenly became the diagnostic parameters for emergency resuscitation. I went on to become a physician, and then a forensic pathologist. I was really excited to institute Code Blue in Homer G Phillips in Saint Louis in 1968. I became an advanced cardiac life support instructor. Then

in 1972, I responded to a motor vehicle crash scene in Vermont. The unbelted lady in the passenger seat was drowning on her own blood. I quickly intubated her. I felt quite good about this save. I autopsied her two weeks later. I lost a great deal of my enthusiasm for resuscitation. Dr. Casarett has done an amazing job of searching the history of resuscitation, going back to original works of the drowning society in London. Really well written, and for me a great work, with references. Kouwenhoven appearing near the middle. So what I had thought was the beginning, was only another step in a long history

I work in EMS and teach frequently. Resuscitation and ethics are regular topics. Shocked was fun reading, providing lots of history, insight, and thought provoking material, mostly serious, but with a perfect mix and treatment of unique (if not absurd) practices. Recounting the therapeutic application of tobacco smoke is bound to provoke class participation. If this book had been published before Monty Python, there might have been a few more great movie scenes.

A very interesting book dealing with the history, present and possible future of what constitutes death and how it can be beaten. Written by an obvious expert in the field in an easy to read and easy to understand style. A must read!

Very interesting. The science gets a bit involved, but I learned a lot about resuscitation and recently had an elderly parent pass away and when asked about resuscitating I was able to draw on this information.

Pretty awesome history of CPR and bringing people (and animals) back from not-quite-dead. Written in a way someone like me can understand (no science background) and like but also has parts scientists would value.

Fascinating read. Chronicles the ways that people have tried to revive the dead/nearly dead throughout the centuries. Engaging, often funny and easy read.

This book has a great deal of information about the ever expanding medical advances bringing people back from being nearly dead. At the end, it talks a lot about how massively expensive some of these methods are trending and somewhat questioning the forever affordability of ever more expensive expansion.

A little too cute, and perhaps a bit long for the information content; this is one of these books that I am glad to have read, but it might have been a better 50 page book
