

The book was found

Human Spaceflight: Mission Analysis And Design (Space Technology Series)

Synopsis

This book includes over 800 rules of thumb and sanity checks that will enable you to identify key issues and errors early in the design process.

Book Information

Series: Space Technology Series

Paperback: 1064 pages

Publisher: McGraw-Hill Companies; 1 edition (October 26, 1999)

Language: English

ISBN-10: 007236811X

ISBN-13: 978-0072368116

Product Dimensions: 9.2 x 6 x 1.5 inches

Shipping Weight: 2.7 pounds

Average Customer Review: 5.0 out of 5 stars 4 customer reviews

Best Sellers Rank: #507,855 in Books (See Top 100 in Books) #81 in [Books > Engineering & Transportation > Engineering > Aerospace > Aircraft Design & Construction](#) #274 in [Books > Engineering & Transportation > Engineering > Aerospace > Astronautics & Space Flight](#) #287 in [Books > Textbooks > Engineering > Aeronautical Engineering](#)

Customer Reviews

The book is the best for Human Spaceflight. Not much more to add. A totally must.Cheers

As a graduate student in space architecture, this is the single most useful book I have found for designing human missions and spacecraft. It is an extraordinary collection of valuable information. Part textbook, part reference manual, the book includes both descriptive text and a wealth of numerical data. It is broken up into 31 chapters, each about 20 to 30 pages long. Each chapter focuses on one aspect of human spaceflight, such as structures, power systems, crew accommodations, or planetary surface vehicles, and each is written by one or more experts in the relevant field. Although the book is designed for people who work with spacecraft for a living, it is very accessible. Anyone with a good grasp of algebra and a strong interest in spaceflight should be able to follow most of it. If I could change one thing about this book, it would be to make it a hardbound edition. My copy is rapidly becoming dog-eared. It's just so blasted useful...

Trade paperback, 1035 pp. Illustrations, charts, graphs, tables. An Introduction to Human

Spaceflight
Designing Human Space Missions
The Space Environment -- Hazards and Effects
Surface Environments
Physiology of Spaceflight
Human Factors of Crewed Spaceflight
Psychology of Spaceflight
Safety
Orbit Selection and Astrodynamics
Entry, Descent, Landing, and Ascent
Designing and Sizing Space Elements
Vehicles
Designing, Sizing, and Integrating a Surface Base
Planetary Vehicles
In-situ Resources
Thermal Control
Environmental Controls and Life Support Systems
Crew Accommodations
Attitude Determination and Control
Designing Power Systems
Structures
Extravehicular Activity Systems
Space Robotics
Propulsion Systems
Selecting Launch and Transfer Vehicles
Mission Operations for Crewed Spaceflight
Command, Control, and Communications Architecture
Space Logistics Support
Estimating the Cost
International Crewed Missions
Mars Design Example
Appendix: Inertias of Geometric Primitives
Appendix: Explanation of Earth Satellite Parameters
Index
Glossary of Acronyms

this book is indispensable for anyone designing systems, vehicles or facilities for human space flight.
